

Hi  
(Y)ulia !

(Y)ULIA

### THE ART OF BENDING OVER

Style and substance. Crafted from a silicone blend in a striking shade of pastel green, this is a sleek splash-proof toy that is as bendy as it is powerful thanks to its two motors.

### I. BEFORE

We can imagine you cannot wait to put your new toy to the test but please allow a full charge before your first use (you'll thank us later).

Plug it in with the provided USB cable and wait until the blinking charging light goes solid to indicate charging is complete.

And while we definitely wouldn't blame you for getting impatient, make sure not to use your toy when charging.

### II. DURING

*Getting turned on?*

Turn your toy on first by simply holding one or both power button for 1.5 seconds.

*Keen to experiment?*

By short pressing the upper power button you can choose from one of 8 vibration modes.

*Where to place it?*

Our toys are so intuitive you probably don't need any type of instruction but here below you can find a suggestion sketch to use as inspiration.

CLITORAL  
&  
INTERNAL

*All done?*

Hold the power button for another 1.5 seconds to turn your toy off.

And if you're going to use lube, make it water-based.

### III. AFTER

*How to care for your (Y) TOY?*

It only takes three simple things:

**WATER**

(just don't boil it and avoid submerging it completely)

**ANTI-BACTERIAL SOAP**

(generic or specifically designed for toys)

**COMMON SENSE**

(no alcohol, petroleum or acetone-based products)

Put it away till next time with the love and attention it deserves, away from extreme heat or cold, light and humidity.

Think ahead and make sure it's ready for its next use by recharging it ahead. A full charge will keep your toy going for up to 40 minutes.

Join the (Y) revolution.
