

Hi, I'm
YNES!

Pleasure comes in many shapes, forms and modalities. Ynes is the latest embodiment of Advanced Solo Pleasure.

Somewhat versatile, it does come with a very specific mission: treat your clitoris, more specifically your clitoral glans, to suction-like stimulation via an expert blend of pressure and aspiration.

What sets it apart is that, unlike most, it not only allows you to enjoy different intensities but also an array of patterns that truly feel like the best oral session you've ever experienced, only a little better.

I. BEFORE

We can imagine you cannot wait to put your new toy to the test but please allow a full charge before your first use (you'll thank us later).

Plug it in to a power source via the provided USB cable and wait until the blinking charging light goes solid to indicate charging is complete.

And while we definitely wouldn't blame you for getting impatient, make sure not to use your toy when charging.

II. DURING

Getting turned on?

Turn your toy on first by simply holding one of the two power buttons for a few seconds.

Why two buttons? So it's easier for you to operate your toy while in the midst of action.

Keen to experiment?

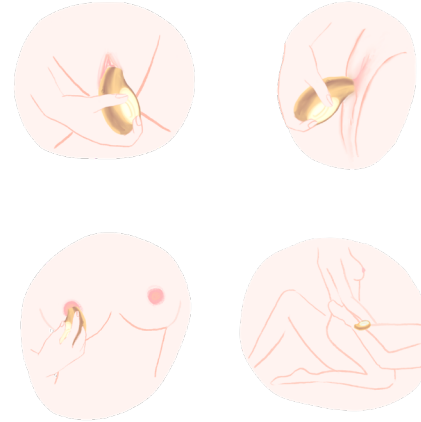

By short pressing the power buttons you can choose select one of the 7 stimulation modes.

How does it work?

The keyword here is: suction. Through air pulse technology, this clever design emulates the feeling of suction albeit in a fully contact-free way that never feels overwhelming, whatever your sensitivity level.

Where to place it?

While you may experiment across different body parts and erogenous zones, this toy was primarily created with the clitoral glans in mind. You may cover it completely or position it around the glans to try different kinds of stimulation.

All done?

Hold one the toy's power buttons for another few seconds to turn it off.

And if you're going to use lube, make it water-based.

III. AFTER

How to care for your toy?

It only takes three simple things:

- water (just don't boil it!)
- anti-bacterial soap (generic or specifically designed for toys)
- common sense (no petroleum or acetone-based products)

Put it away till next time with the love and attention it deserves, away from extreme heat or cold, light and humidity.

Think ahead and make sure it's ready for its next use by recharging it ahead. A full charge, which may take up to 2.5 hours, will keep your toy going for up to 2 hours. Try not to overcharge as it may damage the internal battery.

DISPOSAL INFORMATION

Disposal of old electronic equipment (applicable in the EU and other European countries with separate waste collection systems):

The crossed-out dustbin symbol indicates that this pleasure object should not be treated as household waste, but rather be brought to the appropriate collection point for recycling of electrical and electronic equipment. If you need to dispose of your toy, please follow your local area's protocol for electronic devices.

Disclaimer:

Users of this product do so at their own risk. Neither Yspot nor its retailers assume any responsibility or liability for the use of this product. Changes or modifications not expressly approved by the manufacturer could void the user's authority to operate the equipment.
